

- (n) **Pipe cutter:** Also called a tube cutter, a pipe cutter is a type of tool used by plumbers to cut pipes. Pipe cutters come in different shapes and design as shown in Figure 3.96.

Fig. 3.96: Pipe cutters

- (o) **Scraper:** As shown in Figure 3.97, a scraper is a hand tool that has a small handle and a metallic or plastic blade.

Fig. 3.97: A scraper

- (i) **Hacksaw:** It is a cutting tool made of a thin blade held across a C-frame as shown in Figure 3.91.

Fig. 3.91: A hacksaw

- (j) **Plane:** Appearing as shown in Figure 3.92, a plane is a general-purpose woodworking tool for smoothing the surface of timber by removing excess material.

Fig. 3.92: A Jack plane

- (k) **Chisel:** It is a hand tool with a characteristically shaped cutting edge of blade on its end. There are different types of chisels as shown in Figure 3.93.

(i) Cold chisel

(ii) Wood chisel

(iii) Stone chisel

Fig. 3.93: Different types of chisels

- (l) **Strap cutter:** It is a hand held tool with a sharp blade as shown in Figure 3.94.

Fig. 3.94: A strap cutter

- (m) **Bolt cutter:** It is a tool with two long handles and two short blades as shown in Figure 3.95.

- (e) **Shears:** It is a tool that has two blades joined together at the middle so that the sharp edges slide against each other just like, but generally larger than scissors. There are different types of shears, some of which are shown in Figure 3.87.

(i) Carton shears

(ii) Leather shears

Fig. 3.87: Types of shears

- (f) **Snips:** These are hand tools used to cut sheet metal and other tough materials. They come in different types as shown in Figure 3.88.

Fig. 3.88: Snips.

- (g) **Secateurs:** They are also called pruning shears or pruners. It is a cutting tool that looks like a pair of strong, heavy scissors. They come in different shapes as shown in Figure 3.89.

Fig. 3.89: Secateurs

- (h) **Hand saw:** A hand tool with a toothed edge. There are different types of hand saws, some of which are shown in Figure 3.90.

(i) A rip cut saw

(ii) A tenon saw

(iii) A bow saw

(iv) A pruning saw

What have we learnt?

1. A cutting tool is a device that is used to chop, split, shape or remove excess material from a workpiece.
2. The common cutting tools are as follows:
 - (a) **Knife:** A knife is a small tool that consists of a sharp metal blade fastened to a handle. There are different types of knives such as shown in Figure 3.83.

(a) Utility knife

(b) Skiving knife

Fig. 3.83: Types of knives

- (b) **Panga:** A panga is also called a machete. It is a tool made of broad blade with different shapes as shown in Figure 3.84.

Fig. 3.84: Different types of pangas

- (c) **Axe:** An axe is a woodworking tool shown in Figure 3.85.

Fig. 3.85: An axe

- (d) **Scissors:** It is a tool that has two blades joined together at the middle so that the sharp edges slide against each other. There are different types of scissors, some of which are shown in Figure 3.86.

(i) Tailor's scissors

(ii) Barber's scissors

(iii) Paper scissors

(iv) Surgical scissors

Fig. 3.86: Types of scissors
